## Projects

### Terraform CI/CD Pipeline | Jenkins, Terraform, AWS, GitHub Webhooks, Ngrok Explorer

Dec 2025

- Automated infrastructure provisioning by engineering a Jenkins CI/CD pipeline that utilizes Terraform to deploy and manage scalable AWS resources as code.
- Streamlined deployment workflow using GitHub Webhooks and Ngrok for automatic build triggers, ensuring continuous integration and immediate validation of code changes.
- Integrated security and governance by implementing credential masking, environment-specific variable logging, and a manual approval gate to ensure plan accuracy before execution.

### Home Security System | Python, OpenCV, TensorFlow, Raspberry Pi, IoT Sensors

Apr 2024

- Engineered an automated surveillance solution designed to process video feeds in real-time, detecting security anomalies and immediately notifying homeowners to reduce response times.
- Developed the core threat detection logic using computer vision algorithms to identify movement and specific object classes. Integrated the software pipeline with Raspberry Pi hardware and IoT sensors to ensure low-latency processing at the edge. Successfully deployed a notification system that pushes alerts upon detection, validated through rigorous testing for false positive reduction.
